Noa Kadish

Junior Full Stack Developer

noa.kadish@outlook.com | 0548527526 | Petach tikva | Noa-kay | Noa kadish

PROFESSIONAL PROFILE

Results-driven Full Stack Developer with strong logical thinking and a passion for deep system investigation. Proven track record of mastering new technologies quickly and delivering precise, creative solutions under pressure. Looking to join a development team as a Full Stack Developer to drive technical growth.

EDUCATION

2020–2024:
Full Matriculation Certificate: Beit Yaakov High School, Petah Tikva.

09/2024–05/2026:
MAHAT Studies: Specialization in Full-Stack Development, Databases, Systems Analysis, and Software Engineering.

UltraCode: Advanced technological training focusing on complex web architectures, client and server-side code optimization, and data-intensive application development.

Practical Experience 05/2026 – 07/2026:
Chip Design & Verification Practicum: Successfully completed a comprehensive 250-hour, 9.5-week intensive program specializing in semiconductor planning, advanced simulation technologies, and hardware design verification methodologies.

`Github: WIFI-RX-Decimation-Verification`

Self-Learning & Enrichment:
Completed professional online courses via the Campus IL platform in technology, development, and more. Continuous independent learning of new tools and technologies at all times.

TECHNICAL SKILLS

Languages & Frameworks:
HTML, CSS, JavaScript, TS, Node.js, Angular, React, Java, C#, Python, SQL, Spring Boot, .NET Core, H2, MongoDB, AWS, Unix, Verilog, UVM.

Tools & Infrastructure:
Git & GitHub, Salesforce, Algorithms, Data Structures, SOC fundamentals, DevOps fundamentals - Docker, Copilot, Claude, Cursor, Chip Design & Verification fundamentals, Logic Simulation.

Design & Software:
Microsoft Office, Canva, Photoshop.

Operating Systems:
macOS, Windows, Linux (Project experience)

LANGUAGES

Hebrew: Native
English: Very high proficiency, daily exposure and usage.

SELECTED PROJECTS

Cars – E-commerce Platform:
Designed and developed a responsive vehicle showcase and sales site using HTML and CSS. Optimized loading times and utilized Media Queries to ensure full responsiveness.

Tools: HTML, CSS.

`GitHub: Cars-website`

Color Bomb – Interactive Browser Game:
Developed a game application based on JavaScript, implementing complex client-side algorithmic logic.

Tools: HTML, CSS, JavaScript.

`GitHub: Color-bomb-game-in-js`

Fynx – Collaborative Full-Stack Application:
Developed an end-to-end web system using Angular and Spring Boot for real-time data management and user interaction. Implemented REST APIs, multipart file uploads, and integrated an AI Chatbot while maintaining clear data separation through DTOs and Mappers.

Tools: Angular, Java, Spring Boot, H2 Database.

`GitHub: Fynx`

Fynx – Automation & Testing Framework:
Developed a robust regression testing framework using C# and Selenium (POM), handling dynamic elements and advanced synchronization to ensure platform stability.

Tools: C#, Selenium, JS Executor, WebDriverWait.

`GitHub: Fynx-Automation`

Recipes – RESTful API Recipe Management Server:
Developed a backend system for user and content management, including authentication and RBAC. Implemented core server-side logic, data validation, and cloud-based database management.

Tools: Node.js, Express, MongoDB Atlas, Joi, Postman.

`GitHub: Recipes-Project-NodeJS`

Seminar-Site – Student Profile Component in Institutional System:
Developed a microservice for an integrated system, enabling management of personal profiles, projects, skills, and a CV-generator chatbot. Implemented an End-to-End architecture featuring a secured API server and a dynamic Vite-based client interface.

Tools: ASP.NET Core 7, React (Vite), Entity Framework Core, JWT, Material UI.
